- The project focuses on building a Smart Ticket Booking System.
- It allows users to book tickets for events easily.
- The system automates booking, payment simulation, and receipt generation.
- Users receive a downloadable PDF receipt after booking.
- Email notification is also integrated for confirmation.
- Reduces manual effort and improves efficiency.
- Useful for colleges, seminars, and events.
- Built using Full Stack Development concepts

PROBLEM STATEMENT

1
2
3
4
5
6
7
8
9

- Manual ticket booking systems are slow and inefficient.
- Data handling errors are common in traditional systems.
- No proper tracking of bookings and receipts.
- Lack of automation leads to poor user experience.
- Need for a digital system to manage bookings efficiently.
- Requirement for instant confirmation and receipt generation
- Existing systems do not provide automatic email confirmation or digital receipts, making it difficult for users to track bookings.
- Lack of centralized management for events and bookings, causing difficulty in monitoring availability and user activity.

OBJECTIVE(S)

The picture can't be displayed.

- To design and develop a full-stack ticket booking system.
- To implement automated booking, payment, and receipt generation.

PROPOSED SYSTEM

The picture can't be displayed.

1
2
3
4
5
6
7
8
9

- Online ticket booking interface for users.
- Secure login system (User & Admin).
- Event selection and ticket booking module.
- After login, users can view event details.
- Users can select number of tickets to book.
- It checks email format and required fields.
- Admin panel for managing events.
- Booking history tracking system.

PROPOSED SYSTEM ARCHITECTURE

PROPOSED SYSTEM ARCHITECTURE

- **Input→**
  User enters details (name, email, tickets)
- **Processing→**
  Backend handles booking
- **Database→**
  Stores users, events, bookings
- **Output→**
  PDF receipt + email confirmation

TECHNOLOGIES USED

The picture can't be displayed.

1
2
3
4
5
6
7
8
9

- **Frontend:** React.js, HTML, CSS
- **Backend:** Node.js, Express.js
- **Database:** MySQL
- **Tools:** VS Code, Postman
- **Other:** Nodemailer, PDF Generator

MODULE DESCRIPTION

1
2
3
4
5
6
7
8
9

➢ Module 1:User Module

- Handles secure user login and authentication
- Allows users to select events and book tickets
- Enables users to enter personal and booking details
- Provides payment simulation and booking confirmation
- Displays booking history with option to download PDF receipts

➢ Module 2:Ticket Booking Module

- Shows available tickets for the event
- Allows users to select number of tickets
- Validates ticket availability
- Prevents overbooking
- Updates remaining ticket count after booking

MODULE DESCRIPTION

9

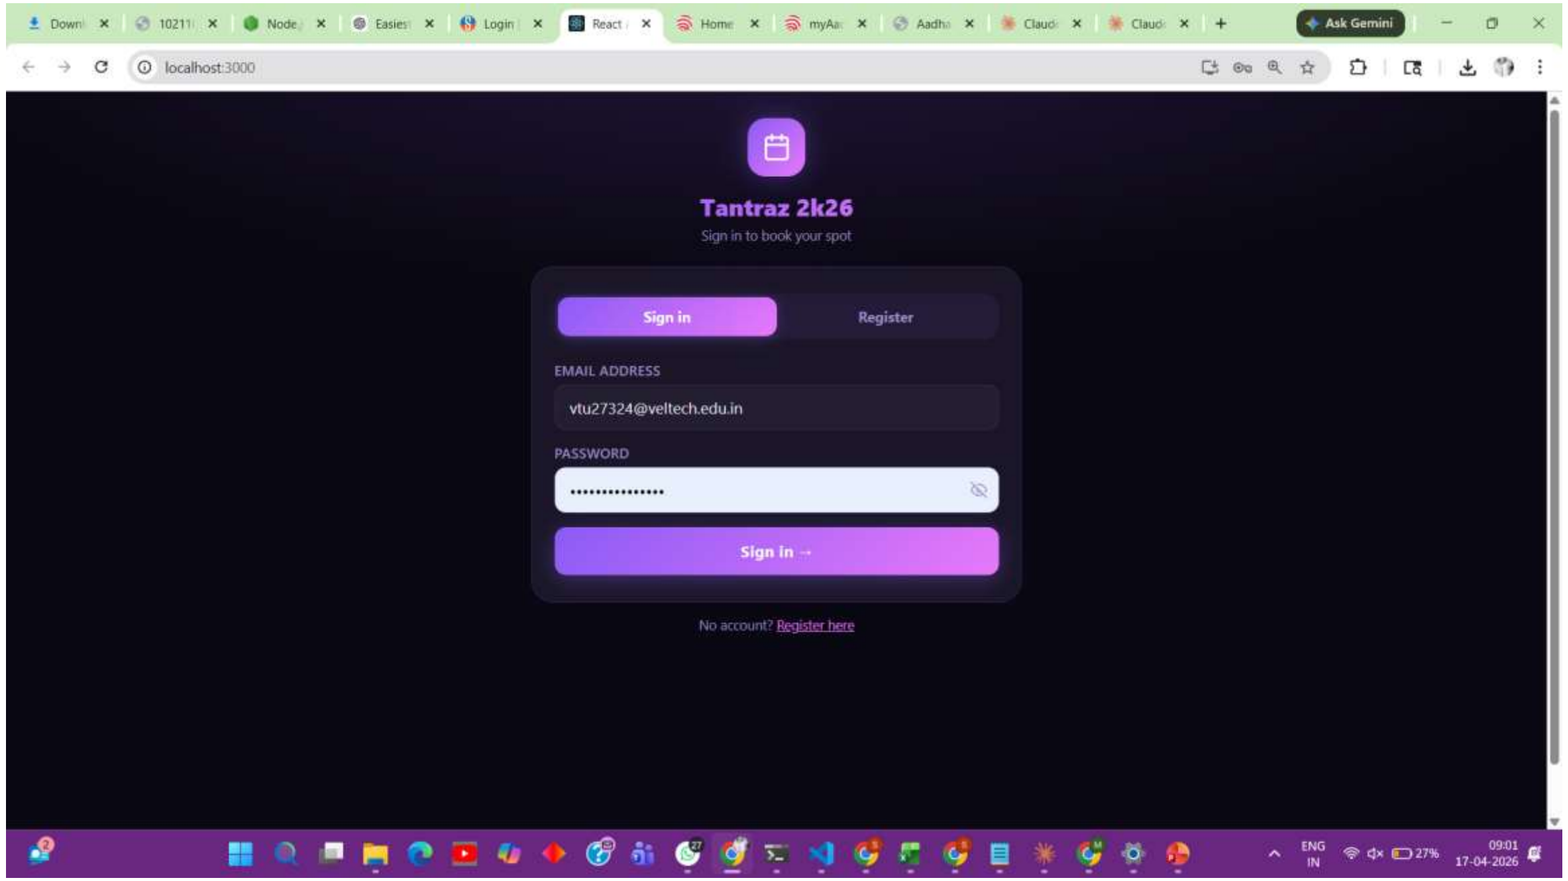
➢ Module3:Booking Module

- Allows users to select events and number of tickets
- Collects user details like name, email, and department
- Calculates total ticket amount based on selection
- Validates ticket availability before confirming booking
- Stores booking details in database for future reference

➢ Module 4:UI Module (User Interface Module)

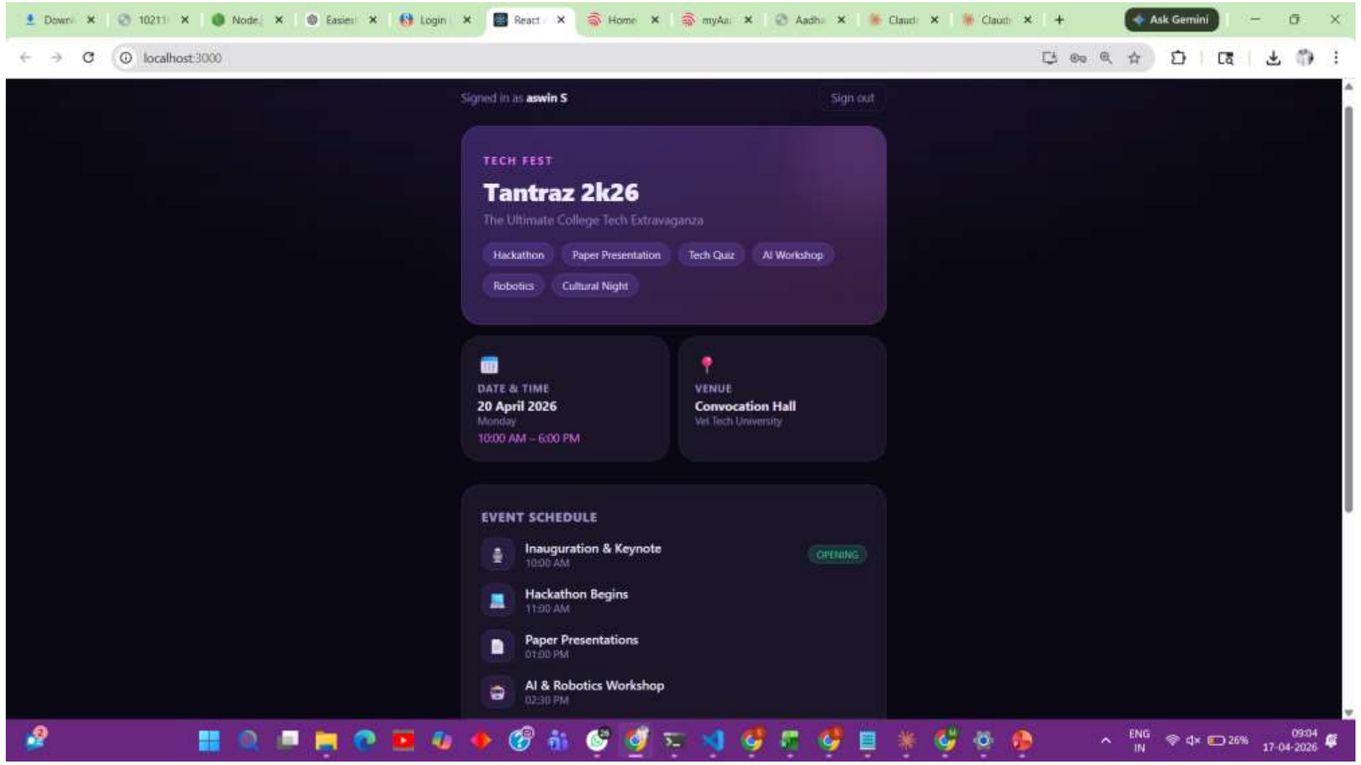
- Provides interactive and user-friendly interface
- Displays event details (name, date, venue, price)
- Uses colorful and responsive design
- Improves user experience

IMPLEMENTATION SCREENSHOTS



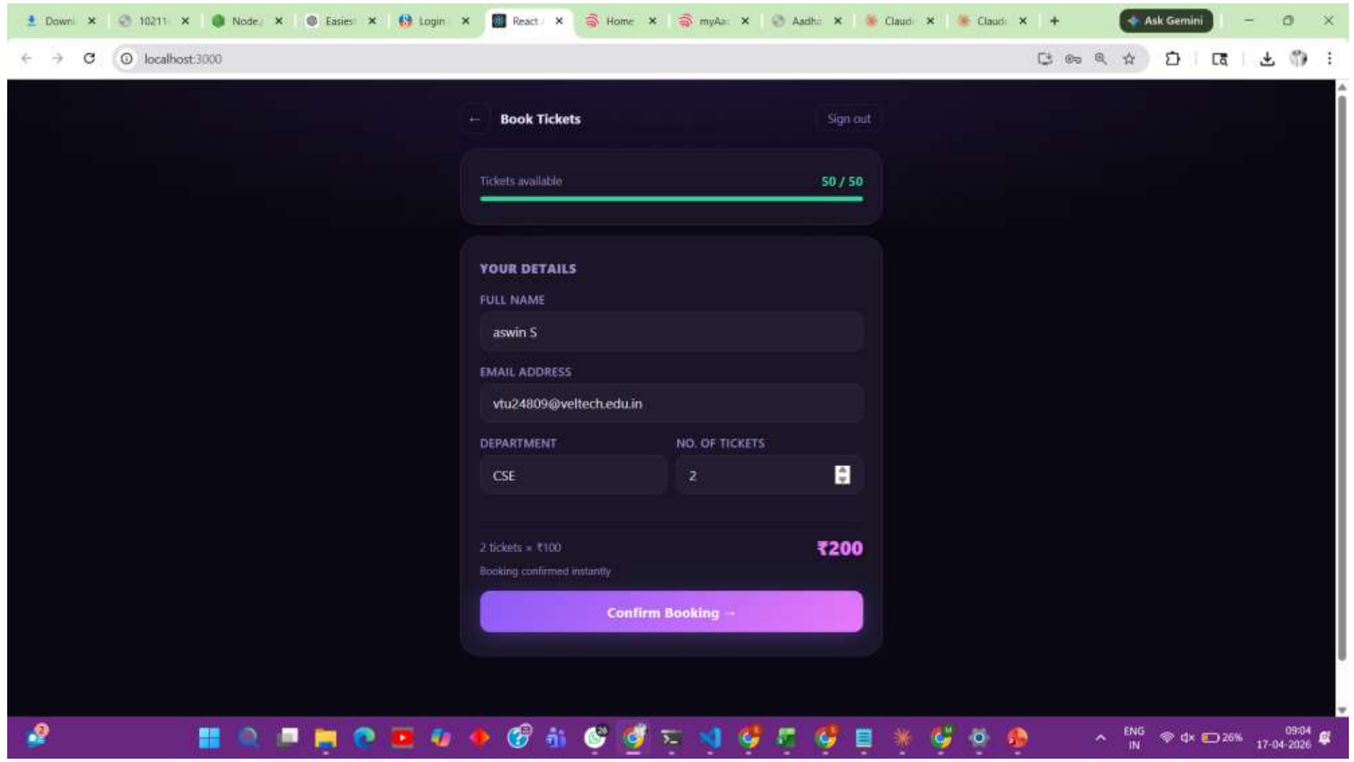
- Login page:
  - Provides secure login for users and admins using email and password
  - Validates credentials and redirects users to respective dashboards

IMPLEMENTATION SCREENSHOTS



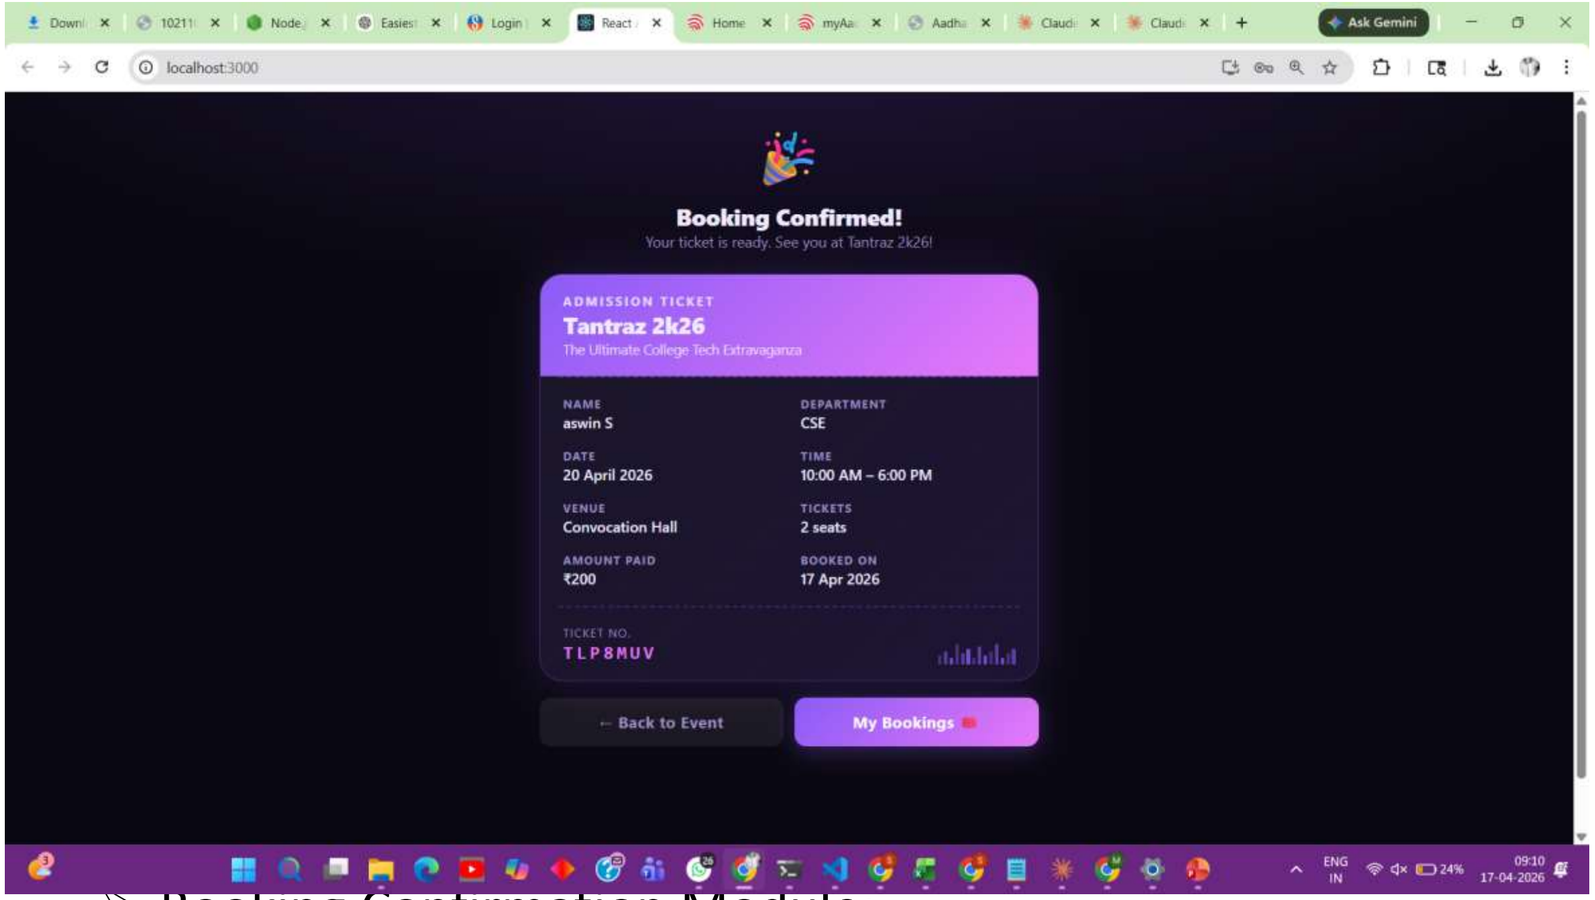
- Booking Page:
  - Allows users to select event, enter details, and choose number of tickets
  - Displays ticket availability and calculates total amount dynamically

IMPLEMENTATION SCREENSHOTS



- Payment Page:
  - Displays booking summary and allows user to enter payment details (card info)
  - Simulates payment process and confirms booking on successful payment

IMPLEMENTATION SCREENSHOTS



- Booking Confirmation Module:
- Display booking conformation after successful ticket booking
- Shows event details such as event name,date,time and venue

ADVANTAGES & LIMITATIONS

The picture can't be displayed.

4
5
6
7
8
9

- **Advantages:**
  - Easy to use
  - Fully automated
  - Saves time
  - Instant receipt generation
  - Email confirmation
- **Limitations:**
  - Payment is simulated (not real gateway)
  - Requires internet
  - Limited to predefined events
